

Computer Forensics Program

The Program in Brief

The Computer Forensics program provides its participants with a comprehensive understanding of computer forensics and investigation tools and techniques. All major personal computer operating system architectures and disk structures will be discussed. Participants will learn about the most relevant software and hardware tools, the importance of digital evidence controls, and how to process crime and incident scenes. Participants can also look forward to in-depth coverage of key areas like data acquisition, computer forensic analysis, e-mail investigations, image file recovery, and investigative report writing.

The Type of Program Participant Who Would Benefit Most:

Anyone interested in eventually entering a technical field of law enforcement or anyone whose work involves information technology related security duties would be well served by this program.

Prerequisites

A high level of computer literacy, preferably A+ Certification or equivalent experience would be ideal.

Key Topics

- The Computer Forensics Profession
- Computer Forensics Tools
- Digital Evidence Control
- Data Acquisition
- Computer Forensics Analysis
- E-mail Investigation
- File Recovery
- Formal Report Writing

Other Key Program Elements

Participants can expect to be continuously challenged by way of demanding assignments and projects aimed at helping them build high level skills. Some labs/ assignments/projects to be expected include:

- Data Recovery Lab
- Encrypted Password Cracking Lab

Other Programs/Certifications participants will be in a position to successfully participate in/pursue upon completing this program:

- Ethical Hacking & Penetration Testing Program
- CCE Certification

Factors worth noting

- This is an instructor led program.
- This program is available on a full time, part time bases; 5 day crash course available.
- Crash course includes mandatory 4 week of supplementary lab access with assignments.
- Authorized Testing Centre in Southern Ontario
